

# Application Service Add-on Module

Automated & customised integration between Benchmark Estimating Software & your other mission critical business systems

## Benchmark Estimating Software's new Application Service Module

The Benchmark Estimating Software Application Service module is designed to facilitate automated and customised integration between our software and your other mission critical business systems.

### Overcome common business challenges

Our Application Service module can help your business overcome many common challenges in businesses today including:

- Having **one source of Customer and Subcontractor/Supplier data** and having this synchronised with Benchmark Estimating Software's Libraries
- Having **one source of financial Cost Codes** and having this synchronised with Benchmark Estimating Software's Codes feature
- Creating a consistent Budget format and **populating your accounting/ERP/job costing system** with a budget automatically from your estimate.

Overcoming these challenges and others saves time re-entering data, eliminates errors, improves operational workflows and helps you to improve job costing reporting which can also help to improve your estimating accuracy and profits.

New in Version 7.4 of Benchmark Estimating Software, the Application Service module is available as an add-on to both the Professional and Corporate editions of the software.

### For more information

If you are interested in discussing how this module can help you address your business integration issues and make your operations more productive, please contact our Client Services Team on +61 2 4422 3444 or email [support@benchmarkestimating.com](mailto:support@benchmarkestimating.com).
